

Practical Innovation

Practical approaches to Solve Problems, Identify Opportunities and Drive Business Efficiency.

Join us for this One Day Interactive programme of Theory, Practice, Case Studies and Follow-Up Workplace Application at Melbourne's most prestigious training and conference centre.

Leaders need to find new ways to deliver better services and add bottom-line value to their organisations.

How do we move from talking Innovation, to doing it?

Organisations are attempting to do more with less in a sustainable way, while still needing to improve service delivery and profit. A difficult task, even at the best of times.

The thinking that worked well enough in the past to achieve this is no longer sufficient to ensure long-term survival and relevance into the future.

We can either tread water and reduce service delivery or, we can think differently and design new value-adding ways forward.

“Practical Innovation” has been designed to add this value.

We struggle to break free from day to day habits and procedures that can inhibit us. Yet, we all understand that to deliver the quality services that are now demanded, we need to innovate and evolve at an increasing rate.

We can't achieve this by doing the same things year in, year out.

Practical Innovation will provide participants with a range of methods to help address current organisational needs, improve business efficiency and help identify new and emergent opportunities.

Participants will learn and practice a range of practical frameworks, tools and techniques that will enable them to think and design actions in a more focused, strategic and creative manner.

Learning Outcomes

Develop clear problem & opportunity statements that are focused on action and resolution.

Determine the nature of your issues to ensure that context appropriate solutions are designed & ensure we don't default to our first pattern match solutions.

Strategically scan across a given issue to ensure more thorough analysis and insight.

Navigate complex issues with intervention design that increases agility and minimises cost.

Generate new and innovative ideas to address issues, improve service delivery and identify opportunities.

Assess ideas and opportunities in a balanced manner without the lack of action usually engendered by risk aversion and the fear of failure.

This training includes a unique work-based assessment for all participants that will allow them to immediately apply the learnings to real, work-related issues. This will allow the impact of their application to be measured and for new thinking and practice to start to embed inside their organisations.

Date: Friday Nov 22, 2013

Time: 9:00am - 4:00pm

Venue: The Airlie Leadership Development Centre,
260 Domain Rd Sth Yarra
